BEYOND is a professional laser design software made for lighting professionals, and used to create the world's highest quality laser shows and effects.

BEYOND supports all lighting protocols including DMX, ArtNET, MIDI, SMPTE timecode, OSC, and CIP (coming soon), making it easier than ever before to integrate lasers into any multimedia show or design.

BEYOND provides you with a complete suite of tools to create any sort of laser display you can imagine, and then gives you the functionality to control your content however you desire (from a lighting console, PC, over timecode, from a MIDI device, or in combination with other multimedia elements).

The BEYOND Essentials Software License shown here can be purchased to run on any Pangolin hardware device. You can also try a FREE demo of BEYOND, by clicking here: [Download BEYOND Demo](#).

Notice: BEYOND licenses are manually generated. Please allow up to 48-hours to receive the file. If your order is placed on a Friday (after 1pm CET), the license file may be sent on the following Monday.
