
Dichroic mirror, 50 x 50 mm (HR R+G, HT B)

Optical parts and Scanner sets

This dichroic mirror is used to reflect RED and GREEN laser beam and to transmit BLUE laser beam with efficiency more than 97%. The available thickness is 1 and 2mm, please define the preferred thickness in you order. Generally the 2mm mirrors have better flatness at larger areas. Our 2mm thick mirrors have flatness $\lambda/4$ at each 10x10mm area. The glass can be cut easily by a diamond. Different size is available on request, please contact us directly.
