

Laser-LED bar [GREEN]

Laser Display Systems

| | |
|----------------------|--|
| Type: | single colour semiconductor diode laser system and white LED blinder (static beams only) |
| Laser class: | 3B |
| Laser output: | 7 x 80mW/520nm (green) |
| LED: | 7 x 3W, gold-white |
| Suitable for: | indoor laser displays |
| Control signal: | DMX512, 3-pin XLR In/Out |
| Power requirements: | 100-230V/50Hz |
| Power consumption: | 46W |
| Weight: | 4kg |
| Dimensions WHD [mm]: | 1000 50 167 |

Laser bars have become very popular during the last few years and we have them in our portfolio too. To develop one is not rocket science but there are many of them available on the market. So instead of manufacturing them, we selected for you the best ones we could find and checked them so they work 100%.

Our Laser-LED bar features **7 powerful green laser beams** and **7 bright warm-white LEDs**. The Laser-LED bar is controlled by DMX512 or alternatively with auto mode or sound mode.

Using several bars within an installation creates heavy impact effect and offers virtually endless number of chases that can be controlled via DMX.
